---

No, this looks good. I will also be planning on getting the info on the other referenced parts, such as Part 13, Part 31, Part 55, etc., but I will just send you an e-mail with the necessary links and/or docs, so I don't know that it needs to be an agenda item. Still trying to find time to finish my variance rule analysis, so we'll hold that to a later call. Another task I have is the demonstration of equivalency for the risk-based approach. Not sure when I'll be able to get to that.

As an FYI, I was advised today that one of our facilities will be submitting a request for alternate closure time under the recently signed Part A revisions. Has that made it to the Federal Register yet? Lansing Board of Light and Power has stated they will submitting the request to EPA in November. I believe it will be under 257.103(f)(2) and it is because they are planning to shut down their plant in 2025, but don't meet liner design or isolation distance requirements. You will get all the details when they make their submittal.

Margie

Hi Margie,

Here's what I was thinking for the agenda for our next call:

- Permitting and licensing, 11511(a) 11512(a)
- Discussion – how can EGLE incorporate EPA's comments/changes?
- Discussion – updating the narrative, or supplementing what EGLE submitted.

What do you think? Any additional items?

Thanks,

Chris
